

ABSTRACT

The present invention provides a public sector technology expenditure benefits realization framework that offers an unparalleled approach for addressing the very specific needs of public sector organizations combining the development of the business case with technology implementation program and integrating a sustainable long-term benefits realizations program. Specifically, in one embodiment, the methodology of the present invention integrates three steps: (1) the visioning phase for creating the vision for the planned benefits; (2) the integration phase comprising the integrating the planned benefits from the technology expenditure; and (3) the realization phase during which the public entity incorporates a sustainable benefits realization and monitoring program.
